STATISTICAL COMMISSION  
Fourteenth session  
Item of the provisional agenda

CLASSIFICATION BY BROAD ECONOMIC CATEGORIES

(Report by the Secretary-General)

1. In the report of the thirteenth session (E/4045), the Statistical Commission recommended that data on large economic classes of commodities of imports and exports distinguishing food, industrial supplies, capital equipment, consumer non-durables and consumer durables should be compiled for each reporting country and for the world and principal regions to supplement the summary data already compiled on the basis of SITC sections (para. 30).
2. In compliance with this recommendation, the Statistical Office of the United Nations has prepared the Classification by Broad Economic Categories (BEC) set out below:

- I. Food and beverages
  - A. Primary
    1. For direct consumption
    2. Supplies to industry
  - B. Semi-finished
  - C. Finished
- II. Industrial supplies (non-food)
  - A. Primary
    1. Agricultural origin
    2. Non-agricultural origin
  - B. Semi-finished
    1. Agricultural origin
    2. Non-agricultural origin
  - C. Finished (non-durable)

- III. Capital goods
- IV. Consumer goods (non-food)
  - A. Durable
  - B. Non-durable and semi-durable
- V. Goods not elsewhere specified
  - A. Primary
  - B. Finished goods and special transactions

This classification, generally based on the framework of annex III to document E/CN.3/312 which gave rise to the Commission's recommendation, incorporates comments received from Governments and interested agencies. An annex to this document contains for each category of the BEC its composition in terms of the Standard International Trade Classification, Revised (SITC, Revised). The BEC is designed not only to realize the original purposes of the Commission, but also to achieve more precise definitions, in terms of the SITC, Revised, of primary commodities, semi-finished goods and finished goods than those contained in "Action Relating to the Report of the Special Committee on Preferences", United Nations Conference on Trade and Development (TD/B/C.2/3, 2 July 1965). In addition, it also differentiates, except for finished products, commodities of agricultural origin from those of non-agricultural origin.

3. In defining the classes of the BEC listed above, criteria for determining primary commodities, semi-finished goods and finished goods (consisting of I.C manufactured food and beverages, II.C finished goods for industry, III capital goods, IV consumer goods (non-food) and V.B finished goods and special transactions) play an important role. These criteria cannot in practice be rigorously applied to each item, but they do serve as general guides to classification.

4. Paragraphs 1 and 2 of article 56 of the Havana Charter for the International Trade Organization (ITO) define primary commodities as follows:

1. For the purposes of this chapter, the term "primary commodity" means any product of farm, forest or fishery or any mineral, in its natural form or which has undergone such processing as is customarily required to prepare it for marketing in substantial volume in international trade.

2. The term shall also, for the purposes of this chapter, cover a group of commodities, of which one is a primary commodity as defined in paragraph 1 and the others are commodities, which are so closely related, as regards conditions of production or utilization, to the other commodities in the group, that is as appropriate to deal with them in a single agreement.

While the above definition still seems to meet with general acceptance, the present document will attempt to provide more explicit definitions.

5. Primary commodities are usually products of extractive industries and of farms, forestry, fishing or hunting. When dealing with internationally traded products, it is necessary to consider the magnitudes of the contributions of the various sectors of the economy to the value of the product. Primary commodities, although they may have undergone some transformation, derive almost all of their value from the primary producing sector, not from the sector which may have engaged in a minor transformation. For example, cotton undergoes physical transformation when ginned, but as almost all the value of ginned cotton derives from the agricultural sector, it is normally classified as a primary commodity, not as a product of the textile industry in which cotton ginning is included (see ISIC).<sup>1/</sup> Canned and prepared foods, on the other hand, owe much of their value to the food processing industry and are generally excluded from the primary classification. It, therefore, appears desirable to adhere to the principle that a commodity is primary if it is a product of farm, forest, fishing and hunting, or any mineral, to whose value transformation has made only a very minor contribution.

6. The definition of semi-finished products most commonly used in economic statistics is related to input-output tables representing the flow of goods between and within industries. Thus semi-finished products are goods which are at the same time outputs and inputs of goods-producing industries. In order to take full account of sectors other than manufacturing it is suggested that the definition of semi-finished goods include all goods which have undergone transformation, but which require further processing or incorporation in other goods before becoming a capital good or a consumer good. Such a definition would also class as semi-finished, articles destined for such activities as construction - for example, steel girders and cement - on the grounds that they are to be incorporated in another item.

<sup>1/</sup> Indexes to the International Standard Industrial Classification of all Economic Activities, Statistical Papers, Series II, No. 4, Rev.1, Add.1.

7. Given the above definitions of primary commodities and semi-finished goods, finished goods could be defined as goods manufactured for consumption and use in households (including processed food) together with capital goods for industry and those manufactured goods of a non-durable nature used by industry. These three definitions thus would cover all important commodities.

8. To summarize, the three proposed definitions of internationally traded goods are as follows:

(a) A primary commodity is a product of farm, forest, fishing and hunting, or any mineral, to whose value manufacturing has made no more than a very minor contribution.

(b) A semi-finished good is a product of manufacturing which requires further processing or incorporation in other goods before becoming a capital or consumer good.

(c) Finished goods comprise all manufactured commodities for consumption and use by households plus capital goods for industry and manufactured goods of a non-durable nature used as supplies to industry (e.g. jet fuels).

9. In addition to the definitions set out in the foregoing paragraphs, which were applied in preparing the BEC, the following are further criteria embodied in the classification.

(a) Non-durable finished goods for industry (II.C) are those with a useful life of one year or less. Durable finished goods for industry as well as for Governments and non-profit private institutions (with a useful life of more than one year) are classified as capital goods (III).<sup>2/</sup>

(b) Non-durable consumer goods (non-food) are those with a useful life of one year or less including commodities used by Governments and non-profit private institutions; semi-durable are those with a useful life of more than one year but less than three years of relatively low value; and durable are those with a useful life of three years or more, as well as those with a life of about one to three years of relatively high value.

(c) A semi-finished product composed of elements of agricultural and non-agricultural origin, is classified as of agricultural origin if the major part of its value is contributed by the agricultural sector.

---

<sup>2/</sup> Except military goods which are classified as consumer goods.

10. It is a well known fact that many internationally traded commodities are used both for private consumption and for industry. The BEC is therefore subject to significant distortion if such commodities are classified under only one of these headings. To remedy this anomaly, important commodities known to be used for more than one purpose are listed under more than one heading. These commodities are marked with an asterisk. For instance, petroleum products known to be mainly consumed by industry but also substantially by private consumers, Governments and non-profit private institutions, are, therefore, listed under "Finished (non-durable) industrial supplies" and "Non-durable consumer goods". Because of the necessity for determining proportions of such commodities destined for different uses in producing statistics based on the BEC and the difficulties involved in obtaining data for determining such proportions, the number of such commodities are, at present, arbitrarily limited to twenty-seven. It is hoped that the national statistical offices will be willing to supply, once a year, for their imports of the twenty-seven commodities the estimated proportions destined for each of the specified categories in order to facilitate the task of the Statistical Office in arriving at a realistic set of factors to be applied to the import and export data of individual countries as well as to regional and global totals. This refinement will improve substantially the usefulness of the data.

11. The less important commodities having a similar nature to those described in para. 10 are listed only under the heading which represents their major use. In the case of fresh grapes, the bulk is used as input by the wine-making industry, but those entering international trade, which call for elaborate refrigeration equipment for their transport, are found to be mainly destined for retail sale and are, thus, classified as primary food for direct consumption rather than as a supply to the food industry.

12. The annex to this paper presents lists of items<sup>3/</sup> of the SITC, Revised, which make up the various categories of the BEC listed in para. 2 of this document. The SITC, Revised, is used for defining the Classification by Broad Economic Categories (BEC) because most countries (about 110) compile their trade statistics for international use in essentially the full detail (5-digit level) of the SITC, Revised, including those countries using for customs tariff purposes the Brussels Tariff Nomenclature (BTN), with which the SITC is compatible.

<sup>3/</sup> When an entire SITC division, group or subgroup is classified in a class of the BEC, the Division, group or subgroup is listed instead of its component SITC items.

13. It is envisaged that no matter how exhaustive the research involved in producing these definitions, minor anomalies may still exist in the lists set out in the annex. The Statistical Office is prepared, needless to say, to adjust these anomalies which can be discovered only by experience through implementation of the classification for a reasonable period of time.
