STATISTICAL COMMISSION
Twenty-ninth session
10-14 February 1997
Item 12 of the provisional agenda*

TECHNICAL COOPERATION IN STATISTICS

Technical cooperation activities in statistics

Report of the Secretary-General

SUMMARY

The present report has been prepared in response to the request by the Statistical Commission at its twenty-eighth session (New York, 27 February-3 March 1995) that the United Nations Statistics Division submit a consolidated report on the state of technical cooperation in the field of statistics to the Working Group on International Statistical Programmes and Coordination.

The information obtained from both donors and recipients has been aggregated and is provided in annex I and annex II respectively of this report.

At the request of the Working Group at its eighteenth session, held in New York, from 16 to 18 April 1996 (see document E/CN.3/1997/19, para. 36), two reports on crucial issues on technical cooperation were prepared, one by the Secretary-General (E/CN.3/1997/18/Add.1) and one by Statistics Canada (E/CN.3/1997/18/Add.2).

INTRODUCTION

1. The Statistical Commission, at its twenty-eighth session (New York, 27 February-3 March 1995), requested the United Nations Statistics Division to submit an analytical written report to the Working Group on International Statistical Programmes and Coordination on the subject of technical cooperation in statistics.¹ The United Nations Statistics Division reported the problems encountered in the preparation of the report on technical cooperation funding to the Working Group on International Statistical Programmes and Coordination at its eighteenth session (New York, 16-18 April 1996) as well as to the Administrative Committee on Coordination (ACC) Subcommittee on Statistical Activities at its thirtieth session (New York, 7-9 May 1996) (see documents E/CN.3/AC.1/1996/R.6 and E/CN.3/1997/21, para. 11, respectively). The Working Group took note of these problems and requested that a report be prepared for the Statistical Commission using the available information. The Working Group also requested that Statistics Canada, the International Monetary Fund (IMF) and the Statistical Office of the European Communities (Eurostat) work with the United Nations Statistics Division to include in the report of the United Nations Statistics Division coverage of crucial issues related to technical cooperation (E/CN.3/1997/19, para. 36 (b)). The report on those crucial issues is provided to the Statistical Commission as documents E/CN.3/1997/18/Add.1 and E/CN.3/1997/18/Add.2.

I. ACTIONS TAKEN

2. Based on experience gained from previous questionnaires and a pilot study undertaken in August 1995, the United Nations Statistics Division believed that it was not feasible to classify technical cooperation funding information precisely in a uniform manner, given the varying methods and definitions adopted in the process of accounting for technical cooperation by different donors and recipients as well as the different accounting periods.

3. Accordingly, the United Nations Statistics Division decided not to provide a precise definition for the term "technical cooperation funding in statistics" or to disaggregate such a category. It recognized that each statistical office might interpret this category differently. However, the common culture of national statistics offices was such that the differences should be reasonably small and the aggregate information might still be useful.

4. The information sought for the report included direction or source of technical cooperation (depending on whether the country was a donor or recipient), the project title and a brief description, as well as the annual cost of the assistance involved.

5. The questionnaire requesting the information on technical cooperation was sent to 25 donor countries, 25 international donor organizations and 158 recipient countries as well as four countries that were grouped as both donors and recipients.

6. Thirty-three donor countries and organizations responded. In addition, 41 developing countries and countries with economies in transition also responded.

However, only eight donor countries, four donor organizations and the European Communities, and 27 recipient countries were able to supply values of technical assistance provided and received. (Some donor countries and organizations provided substantial descriptive material of their technical assistance activities without value indicators.) Therefore, value figures of technical assistance provided are by no means to be considered complete and accurate.

7. That most recipient countries that responded provided only sporadic value figures for certain statistical projects for some years made it difficult to analyse the situation. An attempt was also made to aggregate value figures by country/organization in one common currency (in this case, United States dollars. The harmonization was made using mid-point exchange rates for respective years. Therefore, currency fluctuation might also affect the results of the aggregation. The quantitative responses to the questionnaire are shown in annex I to this report for donor countries/organizations and in annex II for recipient countries. Countries/organizations that provided value figures even for one year are included in the annexes. A full list of the countries/organizations that responded to the inquiry is provided in annex III.

8. For the donor countries listed in annex I, technical assistance provided increased from 11 million dollars to 15 million dollars over the period 1992-1994. However, there was a decrease to under 9 million dollars in 1995. It should be noted that many donor countries are not represented in annex I, and also that there is little correlation between the totals provided by donor countries and those provided by recipient countries, lending further doubt as to the utility of these data. With regard to the donor organizations that reported, amounts in 1992 and 1993 were stable; there was a 30 per cent decline in 1994 and a further 30 per cent decline between 1994 and 1995. The assistance provided by the European Union fluctuated considerably from year to year with a low of 7 million dollars in 1994 and a high of 34 million dollars in 1995.

II. POINTS FOR DISCUSSION

9. The Commission may wish to:

(a) Discuss what, if any, generalizable conclusion may be drawn from the data provided;

(b) Comment on points made in documents E/CN.3/1997/18/Add.1 and E/CN.3/1997/18/Add.2;

(c) Consider ways to obtain more complete and accurate information on funding for technical cooperation.

Notes
